“Autism Spectrum Disorder and Intellectual Disability in DSM-5” (A088)
Videoconference
Quiz for General CEUs, Act 48, CADC, CPRP, NBCC, PCHA, Psychologist, and Social Work/LPC/LMFT
Continuing Education Credit (2.0 credit hours)

DIRECTIONS: Complete this test after viewing the web cast of the webcast listed above. In order for Western Psychiatric Institute and Clinic to record that you completed the training, please complete this test and the Application/Validation for Continuing Education Credit on the next page. After finishing, sign as indicated on the second page and return both forms by mail to:

Jennifer Lichok
WPIC/OERP
3811 O’Hara Street
Champion Commons, Third Floor
Pittsburgh, PA 15213

TRUE/FALSE – Please indicate whether the statement below is true or false.

1. The new DSM-5 has no multiaxial system of diagnosis and the psychiatric and medical diagnoses are listed together.
   A. True
   B. False

2. DSM-5 has added the diagnosis of global developmental delay for children under the age of 5 years who fail to meet expected developmental milestones and the examiner is unable to complete assessment of intellectual functioning.
   A. True
   B. False

3. DSM-5 diagnosis of attention-deficit/hyperactivity disorder is no longer an exclusion in autism spectrum disorder.
   A. True
   B. False

4. DSM-5 diagnosis of autism spectrum disorder combines three domains (social, communication, restricted repetitive behavior) into two (social communication/social interaction, restricted repetitive behavior).
   A. True
   B. False

5. Rates of autism spectrum disorder have increased to 1 in 88 per CDC 2012.
   A. True
   B. False

6. DSM-5 changed the diagnosis of language disorder to combine expressive language disorder and mixed receptive expressive language disorder.
   A. True
   B. False

7. DSM-5 changed the diagnosis of specific language disorder to a single disorder with specifiers for specific impairment in reading, written expression, mathematics.
   A. True
   B. False
MULTIPLE CHOICE – Please choose the BEST answer.

8. DSM-5 diagnosis of intellectual disability includes the following:
   A. Deficit in conceptual domain of adaptive functioning
   B. Deficit in social domain of adaptive functioning
   C. Deficit in practical domain of adaptive functioning
   D. Specify severity on basis of adaptive functioning as mild, moderate, severe, profound
   E. All of the above

9. DSM-5 diagnosis of social (pragmatic) communication disorder includes the following except:
   A. Deficit in using communication for social purposes
   B. Impairment of the ability to change communication to match context or needs
   C. Difficulties following rules for conversation and storytelling
   D. Difficulties understanding what is not explicitly stated
   E. Intellectual disability

10. DSM-5 diagnosis of autism spectrum disorder is a single category which includes the following DSM-IV-TR diagnosis except:
    A. Autistic disorder
    B. Pervasive developmental disorder, NOS
    C. Asperger’s disorder
    D. Childhood integrative disorder
    E. Rett’s disorder

11. Which of the following are true for DSM-5 diagnostic changes in Autism Spectrum Disorder?
    A. Expanded “restricted, repetitive pattern of behavior, interests, or activities” to include abnormalities in sensory processing
    B. Relaxed the age of onset criteria to “early developmental period” instead of an age
    C. Use severity specifiers for levels of support required (level 1, 2 or 3)
    D. Specify if associated intellectual impairment, language impairment, known medical or genetic condition, with catatonia
    E. All of the above
